WORK EXPERIENCE

Virtusa Consulting Services, Chennai

12/2025- Present

Software Engineer (Java Backend)

Capstone Project: Event-Driven Loan Processing System (Feb – Mar 2026)

- Designed and developed a scalable **event-driven microservices architecture** using Spring Boot, Apache Kafka, and REST APIs, handling end-to-end loan lifecycle (Application → Approval → Disbursement).
- Implemented secure API Gateway using **Spring Cloud Gateway and Spring Security (JWT)** ensuring stateless authentication and role-based access control.
- Built asynchronous communication pipelines with **Kafka** to decouple services and improve scalability and fault tolerance.
- Applied **Resilience4j Circuit Breaker** to prevent cascading failures and ensure high availability.
- Containerized services using Docker; enabled service discovery (**Eureka**) and inter-service communication (**OpenFeign**); managed centralized configs via Spring Cloud Config.
- Developed rule-based credit eligibility engine automating loan approval decisions.
- Simulated OCR verification and notification services to mimic document validation and user communication workflows.

Cognizant Technology Solutions, Chennai

12/2021 - 12/2025

Associate (Backend - Java)

- Developed **Java Spring Boot service** to retrieve and process experimental data from laboratory instruments. Integrated with Benchling API's to securely fetch and update experiment data, including assay runs, sample data and measurements.
- Crafted queries in Java using **JDBC** to fetch hierarchical experimented datasets, processed raw measurements into Structured objects streamlining data visualization and analysis.
- Designed and Developed well-documented and scalable **REST APIs**.
- Contributed to development of experiment data File Parsers in java to process CSV and Excel files and validate sample data using **Apache POI** and **OpenCSV**.
- Transformed valid data into structured backend objects and updated Benchling schemas for accurate tracking and sending automated success/failure notifications via mail using **JavaMail**.
- Automated continuous integration pipelines in **Jenkins** to ensure code quality and streamline development workflows.
- Implemented versioning for File Parser utilities by leveraging the functionalities of **Git** and integrating **GitHub** for efficient workflow management and version control.
- Wrote high-quality unit and integration tests using **JUnit** and **Mockito**, to ensure software reliability and maintain code quality.
- Enhanced application performance by designing and selecting appropriate **data structures**.

SKILLS

- **Languages:**Java
- **Database:** MySQL, PostgreSQL
- **Frameworks:**Spring, Hibernate
- **Core Software Modules:**Data structures and Algorithms, Design Patterns, OOPs, Microservices, RESTful
- **Spring Modules:**Sprint Boot, Spring Cloud, Spring MVC, Spring Security, Spring Data JPA
- **QA Frameworks:**JUnit, Mockito
- **Tools:** Eclipse, MySQL Workbench, Postman
- **Others:** Git, Jenkins, Jira

EDUCATION

B.Tech Biotechnology - Kamaraj College of Engineering and Technology, Madurai |CGPA-8| **08/2017 - 05/2021**
